

Person A: Hey, excuse me, is this seat taken? The keynote on DeFi scalability was packed!

Person B: Oh, hey! No, go for it. I'm Tanner, by the way. Yeah, that was a great talk.

Person A: I'm Eric. Nice to meet you, Tanner. So, what brings you to CryptoCon? Are you deep in the DeFi space too?

Person B: You could say that! I'm a software engineer at 1Inch. We're trying to make it easier for users to swap tokens by finding the best liquidity options. How about you?

Person A: That's fascinating! I'm not directly involved in web3 just yet. I'm an AI/Big data consultant at Cognizant. I pretty much have been making cool multi-agent AI solutions for business needs.

Person B: Ah, an AI guy! We definitely need more people like you right now to make sense of all this AI hype chaos. It's interesting, your skills are what the newest projects that have been getting traction are looking for.

Person A: Exactly! It's all interconnected. I've been particularly interested in the intersection of blockchain, NFTs, and AI generated content to try to find ways to ensure content is real, edited, or generated. Seems like a huge potential area.

Person B: Totally agree. We've actually been exploring how decentralized identity could play a role in verifying ownership of tokenized assets. Makes the whole process more secure and transparent.

Person A: That's a great point. We should definitely connect. I'd love to hear more about your project and how DID can be applied there. Maybe we could grab a coffee tomorrow morning before the sessions start?

Person B: Sounds like a plan, Jamie. I'm free around 8:30. Let's exchange contact info. Here's my LinkedIn QR code.

Person A: Perfect. Just scanned it. I'll send you a message. Looking forward to it!
